

## Stage 1 (2) another approach

Another good convolution matrix would be

```
0.004 0.004 0.004  
0.004 0.00004 0.004  
0.004 0.004 0.004
```

See below the results (right ones are original, left ones with convolution matrix)
